1. Introduction

The Security Incident Mapping (SIM) system is a web-based application designed to improve security within the university community. It enables students, staff, landlords, and security personnel to report, monitor, and manage security incidents efficiently. The system promotes timely reporting and faster response to incidents such as theft, assault, vandalism, cultism, and other security-related issues.

2. Purpose

The purpose of the system is to:

- **Provide a platform for reporting security incidents.**
 - **Improve communication between users and security personnel.**
 - **Reduce crime through timely reporting.**
 - **Maintain accurate digital records of incidents.**
 - **Support better decision-making for campus security.**
-

3. Scope

The system allows users to:

- **Register an account.**
 - **Log in securely.**
 - **Report security incidents.**
 - **Upload supporting evidence.**
 - **Track the status of submitted reports.**
 - **Enable administrators to review and update reports.**
-

4. Objectives

The objectives of the Security Incident Mapping system are to:

- **Improve campus security.**
 - **Encourage quick incident reporting.**
 - **Maintain a centralized incident database.**
 - **Enhance emergency response.**
 - **Support effective security management.**
-

5. Overall Description

The system consists of the following users:

- **Students**
- **Staff**
- **Landlords**
- **Security Officers**
- **Administrator**

Each user has different roles and permissions within the application.

6. Functional Requirements

The system shall:

- **Allow users to register.**
 - **Allow users to log in.**
 - **Allow users to report incidents.**
 - **Allow evidence upload.**
 - **Record incident location and date.**
 - **Allow administrators to manage reports.**
 - **Allow users to track report status.**
-

7. Non-Functional Requirements

The system should be:

- **Secure**
 - **Reliable**
 - **Fast**
 - **User-friendly**
 - **Responsive**
 - **Available 24/7**
-

8. System Requirements

Hardware Requirements

- **Computer**
- **Smartphone**
- **Internet connection**

Software Requirements

- **HTML5**
- **CSS3**
- **JavaScript**
- **GitHub**

- **Modern Web Browser**

9. Database Design

Users Table

Field	Type
User_ID	INT
Full_Name	VARCHAR(100)
Email	VARCHAR(100)
Password	VARCHAR(255)
Role	VARCHAR(50)

Incidents Table

Field	Type
Incident_ID	INT
Crime_Type	VARCHAR(100)
Location	VARCHAR(150)
Incident_Date	DATE
Description	TEXT
Image	VARCHAR(255)
Status	VARCHAR(50)

10. System Flow

User Registration

User Login

Report Incident

Administrator Reviews Report

Security Officer Responds

Status Updated

User Tracks Report

11. Benefits

- **Faster reporting of incidents.**
- **Improved campus security.**
- **Better communication.**
- **Efficient record keeping.**
- **Easy monitoring of reported cases.**
- **Better decision-making by security personnel.**

12. Conclusion

The Security Incident Mapping (SIM) system provides an efficient and user-friendly platform for reporting and managing security incidents. It improves communication between users and security personnel while promoting a safer campus environment through timely reporting and effective incident management.
